

Secude & Microsoft Information Security (MIP)

SECUDE

SAP and CAD data loses critical enterprise protections when it's shared externally.

Internal security concerns

Our SAP and PLM repositories restrict user access to our data on the internal network. We need this protection when the data is exported to Excel, meaning anyone in the company can access the information.

Manual protections

When accessing SAP or CAD data outside the corporate network, we must manually apply data protections. This is time consuming and does not offer the same level of protection provided directly by Microsoft Information Protection (MIP).

Limited data access

We do not have a reliable and efficient way to protect our SAP and CAD data once it is shared outside the network. This impedes our ability to collaborate and work with partners and vendors who we rely on for the success of our business operations.

Compliance concerns

We are not in compliance with data privacy and international and industry regulations when we share SAP data with partners and vendors.

HALOCORE® and HALOCAD®
extends Microsoft Information
Protection (MIP) for SAP and
CAD data.

Data-Centric Protection

Monitor and protect sensitive SAP and CAD data beyond the security of the network.

Secure Collaboration

Share data and collaborate with partners, suppliers, and others knowing your sensitive data is protected.

Greater MIP Value

Extend the discovery, classification, labeling, and monitoring capabilities provided by Microsoft Information Protection.

Data-centric Protection

Security policy compliance

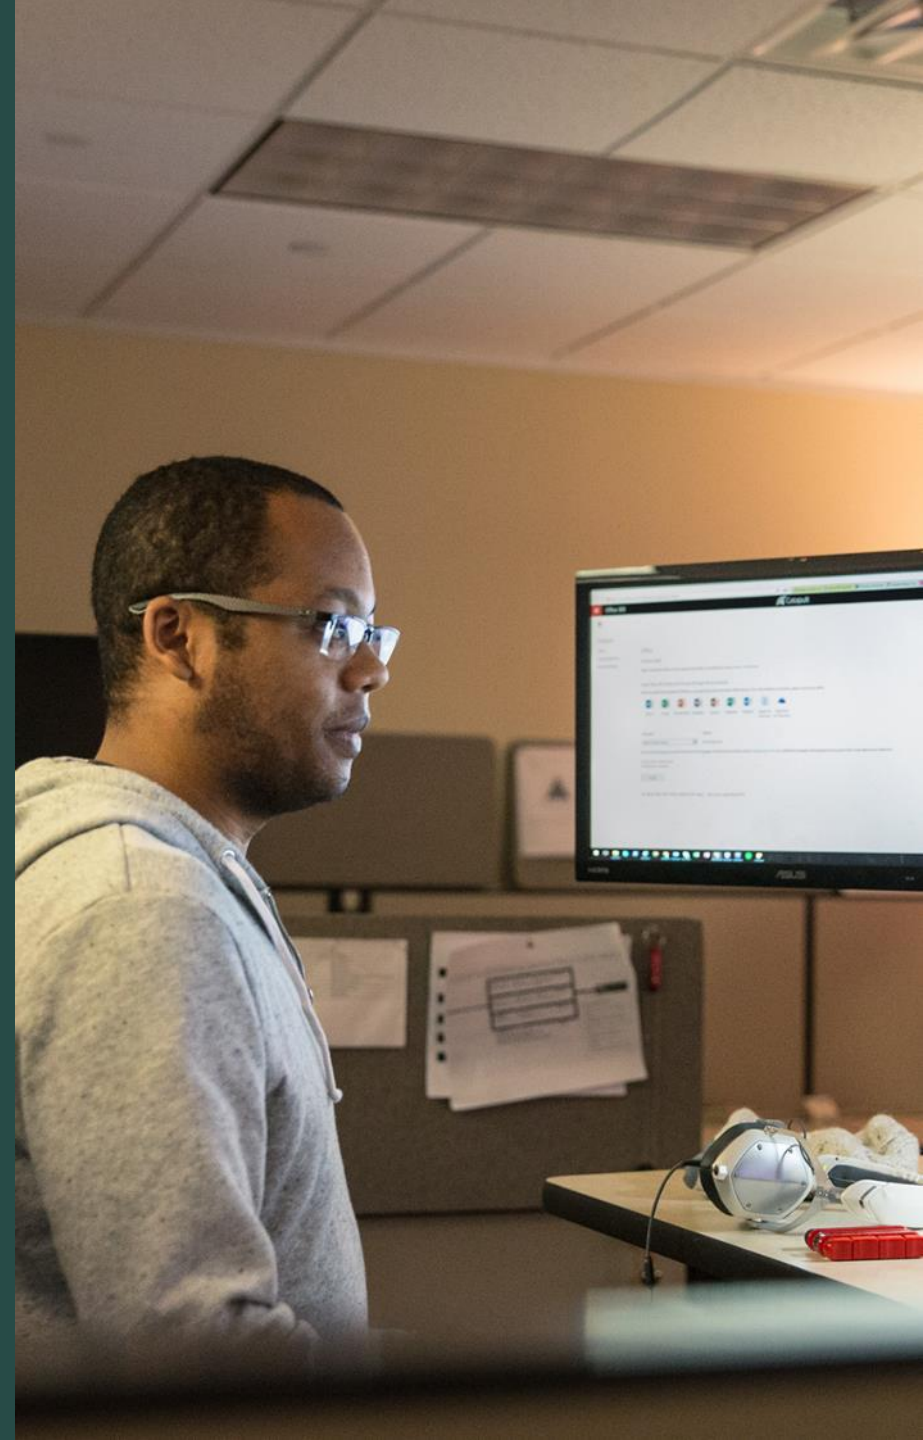

With HALOCORE® and HALOCAD®, your classification-based MIP policy assignments are carried over automatically.

Intercept unauthorized access

Monitor and control external data flow, intercepting unauthorized data requests to understand what data is being shared outside the corporate network.

CAD and PLM app support

CAD and PLM applications cover Autodesk Inventor/AutoCAD, PTC Creo, Siemens NX & Solid Edge, Siemens TeamCenter, SAP PLM, Creo Windchill, Dassault CATIA, and SolidWorks (planned).

Secure Collaboration

Enhance supplier/vendor interactions

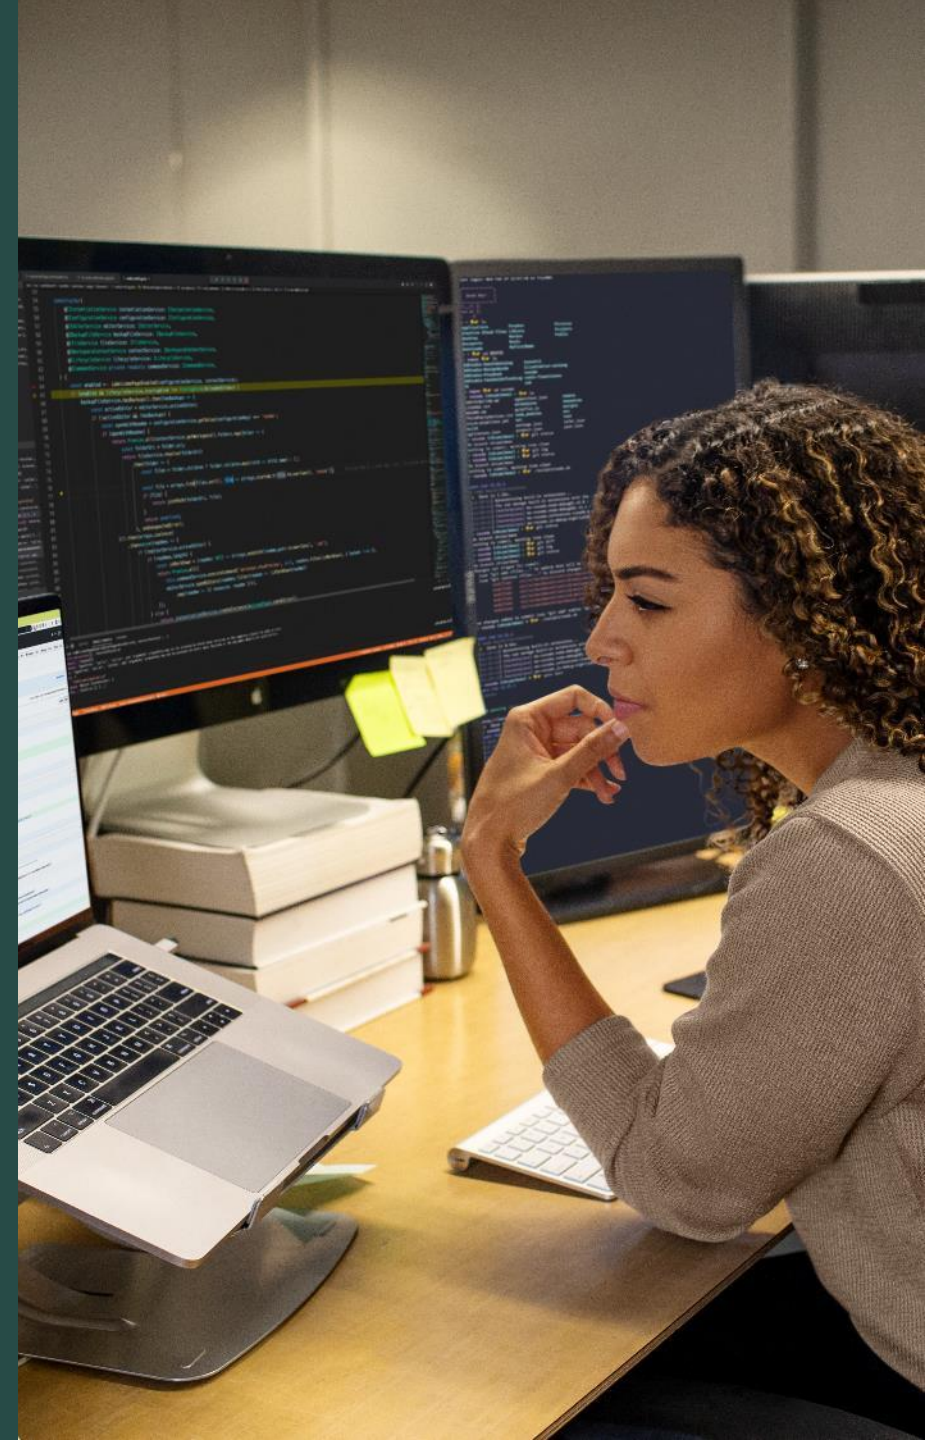

Boost supply chain efficiencies throughout supplier and vendor engagements.

Always-on protection

Ensure your compliance policies are maintained outside the firewall and remove manual data protection steps from the hands of suppliers and vendors.

Expedite supplier onboarding

With HALOCORE® and HALOCAD®, you can ramp up new suppliers faster and with less friction while establishing compliance policies.

Greater MIP Value

Increase your MIP ROI

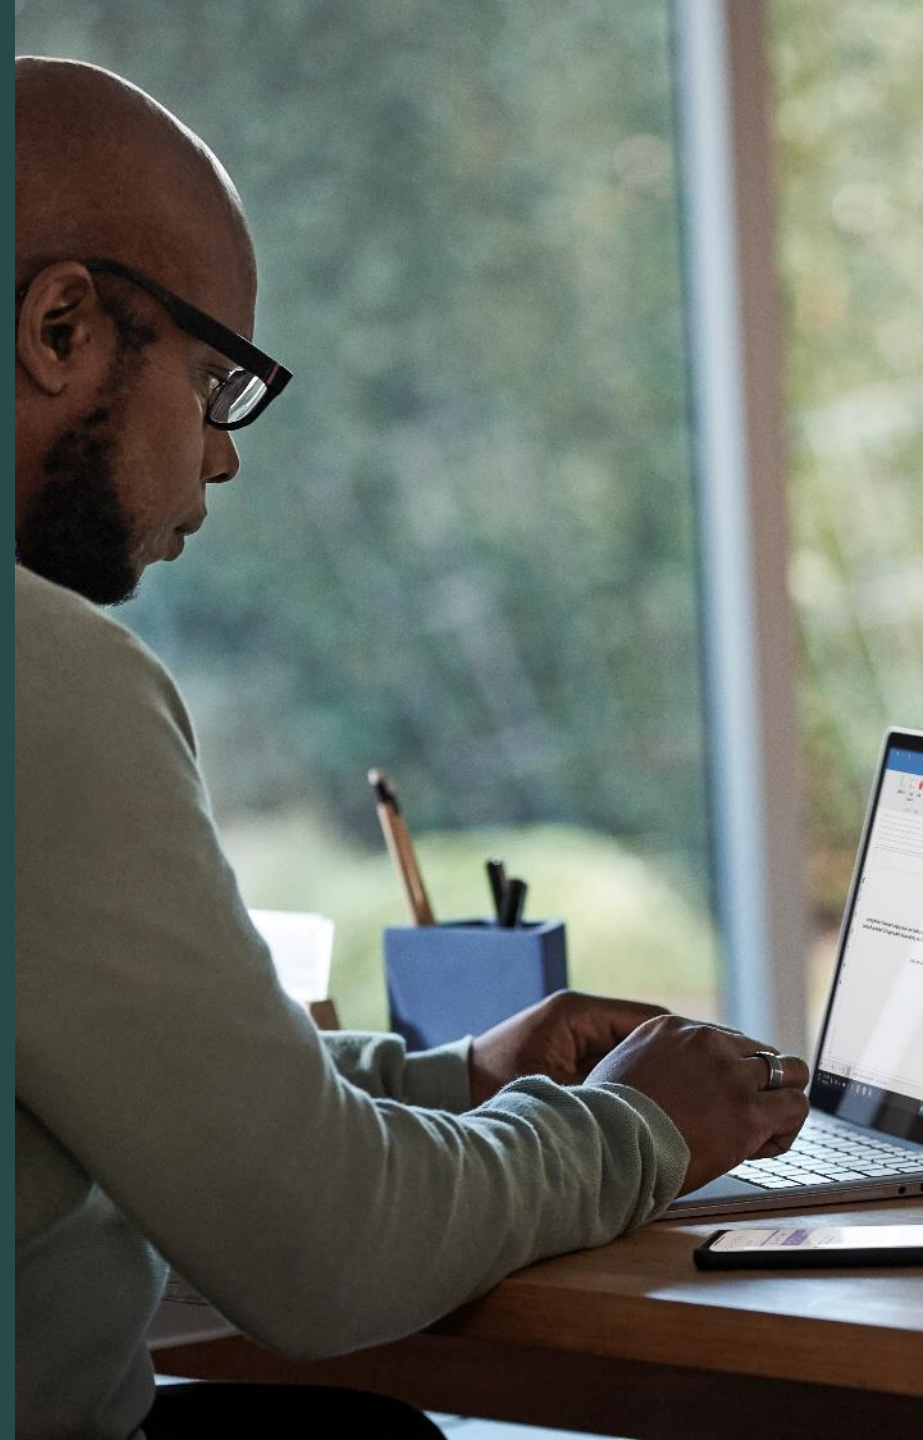

HALOCORE® and HALOCAD® extend your MIP protections to any endpoint using SAP or CAD data.

Extend MIP capabilities

All MIP capabilities are automatically provided to externally requested data, providing the same security both internally and outside the network.

Consistent labeling

The MIP labels used for sensitive data can be applied beyond the manual protections of the M365 E5 scanner.
